

UX Control

Proactive User Experience Insight. Automated 'control users' simulate real work to preemptively ensure business services and applications meet performance standards, avoiding productivity impacts before they happen.

Ceeview UX Control - Capturing the Pulse of User Experience

Ceeview UX (User eXperience) Control is more than just a tool; it is a strategic solution in the evolving IT landscape, adept at capturing the pulse of user experience and ensuring optimal business service performance across on-premise, cloud, and SaaS environments. Through proactive management, user productivity and satisfaction are elevated, thereby directly contributing to enhanced business outcomes.

Key Features

Advanced User Simulation: High-accuracy user interaction simulations empowered by Image & Text Recognition, with support for Desktop, Web, Cloud, and SaaS Applications.

Cross-Platform Compatibility: A unified solution ensuring consistent monitoring experiences across services and applications in Windows, Linux, and MAC environments.

Flexibility at Its Core: Tailorable user experience monitoring with Java and Groovy capabilities, complemented by a low-code API to simplify complex testing and integration.

Reliable Issue Troubleshooting: Features automated visual evidence capture and intelligent retry mechanisms for streamlined problem-solving.

Integrated Infrastructure and Cost Analysis: Delivers complete IT oversight, merging application, network, and cost monitoring for crucial infrastructure-dependent and cost-control scenarios.

Benefits

Superior Performance: Achieve top-notch results in both applications and business services, enhancing user satisfaction and ensuring SLA compliance.

Cost-Effective Monitoring: A budget-friendly solution that reduces the need for expensive tools and complex integrations.

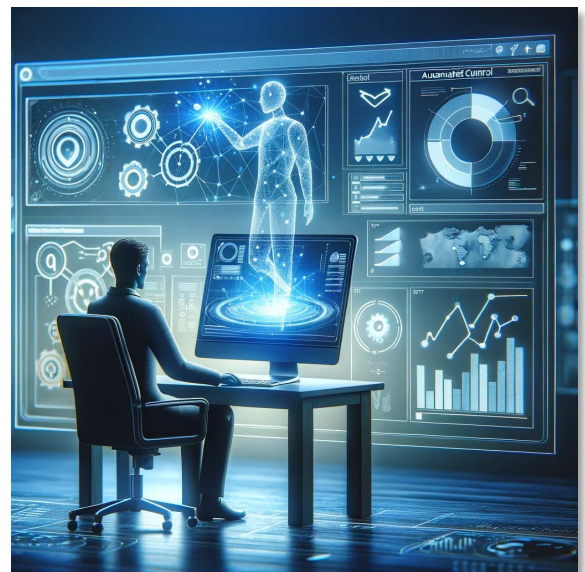

Holistic Insights: Gain comprehensive understanding through multi-location testing, ensuring uniform user experiences across diverse business environments.

“Ceeview UX Control SAAS closes the gap between user experience and SAAS provider SLAs. It provides continuous support of Borr Drilling IT SAAS-first/Cloud-first strategy.

Ceeview UX Control SAAS gives the necessary input to drive business application stability and performance improvements as part of Borr Drilling IT Application Management Services.”

– Vardans Saribekjans, IT Director, Borr Drilling

Ceeview Observability Platform: Integrating and Elevating UX Insights

Elevate your strategic insights with our Intelligent Observability Platform, a testament to Ceeview's service-centric focus. Seamlessly integrating and enhancing UX Control data, it caters to your IT and business environment's unique demands, reinforcing our commitment to transformative service observability.

Integration and Analysis: Effortlessly auto-create and map detailed service models with user experience data for a comprehensive view of application performance, coupled with in-depth state and health analysis for swift troubleshooting and sustained system integrity.

SLA Monitoring and Reporting: Achieve and surpass business service levels through specialized SLA compliance monitoring, complemented by scheduled, insightful PDF reports delivered directly to stakeholders, offering a consistent overview of service metrics and user satisfaction.

Custom Dashboards and Business Outcomes: Design tailored dashboards that intricately reflect your application and user experience landscape, leveraging holistic insights to drive informed decisions and optimize business outcomes.

Regain Command of Your IT Operations with Ceeview UX Control: In an era where IT environments are increasingly shifting to cloud and SaaS models, maintaining control over application performance and user experience can seem daunting. Ceeview UX Control empowers IT teams to regain this control, offering deep insights across diverse applications and platforms. By ensuring a continuous high-performing user experience, our solution is integral to sustaining business productivity in modern IT landscapes.

Take the Next Step: Elevate your IT strategy and user experience management with Ceeview UX Control and the Ceeview Intelligent Observability Platform. Discover how our tailored solutions can revolutionize your application monitoring approach. For a detailed demonstration and to explore the potential of Ceeview in your organization, contact us today.
